# **Syllabus**

#### M5366-010-Data Mining II Spring 2018 Tarleton State Univ Dr. Scott Cook

Project details TR 1:40-2:55 | Office Hours: MTWRF 8:30-10:00 or by appointment

 Location
 Math Bldg 304
 My Office:
 Math Bldg 132 (254)968-1958

 Instructor:
 Dr. Scott Cook
 Math Clinic Hours:
 MTWR 8:00-5:00, F 8:00-2:00

My Email: scook@tarleton.edu | Math Clinic: Math Bldg 203

This course is a continuation of Math 5364 taught Fall 2017. This semester, we will integrate courses from <u>DataCamp</u> using their generous 6 month free trial for classroom use.

First, we will finish some open topics from last semester (support vector machines, advanced model evaluation techniques, etc). Then we will use the DataCamp course on *Deep Learning* to cover artificial neural networks. We will then collectively decide which additional DataCamp courses we will cover with the remaining time.

The DataCamp courses do a great job introducing the main ideas and the code implementation but often gloss over the underlying mathematical foundations. We will use lecture time to expand on the mathematics.

### Materials:

- Required: Anaconda distribution of Python, GitHub account, Amazon Web Services account, DataCamp account
- Required: Python Data Science Handbook, Jake Vanderplas, github.com/jakevdp/PythonDataScienceHandbook AND http://shop.oreilly.com/product/0636920034919.do
- Suggested: The Elements of Statistical Learning, Hastie, Tibshirani, Friedman, web.stanford.edu/ hastie/ElemStatLearn
- <u>Suggested</u>: Many, many internet resources, newsletters, package documentation, etc. This field is huge and changes fast. You must learn to teach yourself using internet-based resources. Hone this skill in this course.

Course Content: Methods for data science including, but not limited to:

- Technology: python, numpy, pandas, scikit learn, matplotlib, seaborn, jupyter, keras (deep learning), regex
- Platforms: Amazon Web Services EC2 or Google Cloud, GitHub
- Supervised Learning Algorithms: Decision Trees, Naive Bayes, k-nearest neighbors, support vector machines, kernels, artificial neural networks & deep learning, random forests/boosting/bagging/other ensemble methods
- Unsupervised Learning Algorithms: principle component analysis, k-means, gaussian mixtures, linear and logistic regression
- Model tuning & evaluation: confusion matrices, accuracy/precision/recall/ $F_1$ , ROC curves, cost sensitive learning, cross-validation, hyper-parameter optimization, overfitting & underfitting
- Other: Natural Language Processing, visualizations, data cleaning

<u>Homework</u>: You will be expected to complete the exercises in the DataCamp courses as homework. There may be additional homework outside of DataCamp.

<u>Seminars</u> We will adopt a seminar style for this course where the students have substantial sway over the topics we cover and lead much of the in-class discussion. Early in the semester, we will make a list of topics and divvy them up to groups of 2-3. That group will research the topic, collect a library of materials, write a summary report, and deliver a lecture to the rest of the class. Each student will do 2 such seminar projects.

**Project**: Like last semester, you will do a capstone project using techniques from the course.

**Exams**: There will be a comprehensive final exam Tuesday, May 8, 8:00-10:30.

<u>Contributions</u>: This field is huge, technically complex, and dynamic. Our class needs to function as a team, trying to identify and present the best, most up to date resources available. As graduate students, you need to do more than just complete the

tasks I assign; you need to contribute to the class in ways that have not been specifically asked for. There are many ways to do this, here are a few examples:

- In class, we struggle to understand some detail of an ML algorithm. You find a great blog post that explains it clearly. You post it on the GitHub repo and tell us a about it in class.
- You make really great suggestions for a classmate's project during their status report.
- You figure out a slick way to handle some IT difficulty.

<u>Grading Policy</u>: The guaranteed grade cutoffs are listed below. At my sole discretion, I may curve the course by relaxing them at the end of the semester.

Homework	40%
Seminars	25&
Project	25%
Final exam	10%

A	[90%, 100%]
В	[80%, 90%)
С	[70%, 80%)
D	[60%, 70%)
F	[0%, 60%)

#### Notes

- In the event that the university is closed for a scheduled class time, you should assume that whatever was scheduled/due on that day will be scheduled/due on the next class meeting.
- You are expected to present a valid TSU ID upon request.
- Aside from university and departmental policy, all aspects of course policy are at the discretion of the instructor and subject to change.

# University Master Syllabus

http://catalog.tarleton.edu/syllabus

<u>Catalog Description</u>: This course centers on the identification, exploration, and description of new patterns contained within data sets using appropriate software. Selected topics will be chosen from data exploration, classification, cluster analysis, and model evaluation and comparison.

Student Learning Objectives: Upon completing this course, a student should be able to do the following:

- a) Examine raw data in order to detect data quality issues and interesting subsets or features contained within the data.
- b) Transform raw data into a form appropriate for modeling.
- c) Select and train appropriate models using the transformed data.
- d) Measure the effectiveness of each model.
- e) Draw appropriate conclusions.

<u>University Policy</u>: Students are responsible for knowing and abiding by the policies and information contained in the Tarleton Student Handbook [TSUSH].

Student Responsibilities: The student is solely responsible for:

- Attending class.
- Completing every assignment by the specified due date.
- Utilizing, as needed, all available study-aid options (including meeting with the instructor, attending Supplemental Instruction (SI) sessions, going to the Math Clinic, using tutorial software, purchasing a student solutions manual, hiring a personal tutor, etc.) to resolve any questions that they might have regarding homework, course material, and/or technology projects.
- Reading all relevant material in the course text and lecture.
- Being present and prepared for each exam on the specified date and time, unless the instructor determines that a makeup exam is warranted (see Makeup Policy above).

- Obtaining assignments and other materials for classes from which they are absent.
- Giving as much effort as it takes to pass this course.

Student Success Statement - ADA: It is the policy of Tarleton State University to comply with the Americans with Disabilities Act and other applicable laws. If you are a student with a disability seeking accommodations for this course, please contact the Center for Access and Academic Testing, at 254.968.9400 or <a href="mailto:caat@tarleton.edu">caat@tarleton.edu</a>. The office is located in Math 201. More information can be found at <a href="https://www.tarleton.edu/caat">www.tarleton.edu/caat</a> or in the University Catalog.

<u>Cell phones</u>: Students are expected to set their cell phone so as to emit no audible noise in the classroom. Except for emergency situations, cell phone use (including texting) during the class period is prohibited. A student who is noticeably (to the instructor) distracted by his/her cell phone and/or distracting others with it may be asked to immediately disable it or to leave the classroom. To compensate for your electronic deprivation, keep your calculator on.

Absence Policy: Class absence policies will be established and enforced by each individual course instructor. The course instructor may recommend to the Dean of Students that a student be dropped from a course if excessive absences prevent satisfactory progress.

<u>Makeup Policy</u>: Each course instructor has the responsibility and authority to determine if work can be made-up because of absences. Students may request make-up considerations for valid and verifiable reasons such as the following:

- Illness
- Death in the immediate family
- Legal proceedings
- Participation in sponsored University activities (It is the responsibility of students who participate in University-sponsored activities to obtain a written explanation for their absence from the faculty/staff member who is responsible for the activity.)

Failing grades Tarleton differentiates between a failed grade in a class because a student never attended (F0 grade), stopped attending at some point in the semester (FX grade), or because the student did not pass the course (F) but attended the entire semester. These grades will be noted on the official transcript. Stopping or never attending class is considered an unofficial withdrawal and can result in the student having to return aid monies received. For more information see the Tarleton Financial Aid website.

Student Safety and Title IX: You are in college to achieve academic success, but you must feel safe and take care of yourself to reach your full potential. You have the right to pursue your education in a safe environment. Title IX makes it clear that violence and harassment based on sex and gender are civil rights offenses subject to accountability. If you or someone you know has been harassed or assaulted, there is help and support on campus. You may seek assistance confidentially through the Student Counseling Center or the Student Health Center. You may also make a report to the campus Title IX coordinator, which may trigger a university investigation (not a criminal investigation). Additionally, you may pursue criminal charges through the university police department. If the assault occurred away from campus, UPD can assist you in connecting with the appropriate law enforcement agency.

Student Counseling Center: 254-968-9044 (phone is answered 24 hours a day, 7 days a week), TSC 212

Student Health Services: 254-968-9271, TSC 212

Title IX Coordinator: 254-968-9754, Admin Annex 1, Room 112

University Police Department: 254-968-9002, located on the back side of Wisdom Gym

## University Core Values

Academic Integrity Statement: Tarleton State University's core values are integrity, leadership, tradition, civility, excellence, and service. Central to these values is integrity, which is maintaining a high standard of personal and scholarly conduct. Academic integrity represents the choice to uphold ethical responsibility for one's learning within the academic community, regardless of audience or situation.

Academic Civility Statement: Students are expected to interact with professors and peers in a respectful manner that enhances the learning environment. Professors may require a student who deviates from this expectation to leave the face-to-face (or virtual) classroom learning environment for that particular class session (and potentially subsequent class sessions) for a specific amount of time. In addition, the professor might consider the university disciplinary process (for Academic Affairs/Student Life) for egregious or continued disruptive behavior.

Academic Excellence Statement: Tarleton holds high expectations for students to assume responsibility for their own individual

learning. Students are also expected to achieve academic excellence by:

- honoring Tarleton's core values.
- upholding high standards of habit and behavior.
- maintaining excellence through class attendance and punctuality.
- preparing for active participation in all learning experiences.
- putting forth their best individual effort.
- continually improving as independent learners.
- engaging in extracurricular opportunities that encourage personal and academic growth.
- reflecting critically upon feedback and applying these lessons to meet future challenges.

Academic Honesty: Tarleton State University expects its students to maintain high standards of personal and scholarly conduct. Students guilty of academic dishonesty are subject to disciplinary action. Academic dishonesty includes, but is not limited to, cheating on an examination or other academic work, plagiarism, collusion, and the abuse of resource materials. The faculty member is responsible for initiating action for each case of academic dishonesty that occurs in his or her class.

<u>Academic dishonesty</u> includes, but is not limited to, cheating on an examination or other academic work, plagiarism, collusion, unauthorized use of technology and the abuse of resource materials.

- 1) Academic work means the preparation of an essay, thesis, problem, assignment or other projects submitted or completed for course credit and to meet other requirements for noncourse credit.
- 2) What constitutes an act of academic dishonesty may, in part, depend on the particular course and expectations of academic integrity in the context of the course objectives. This includes, but is not limited to, the following:
  - 2.1) Copying, without instructor authorization, from another student's test paper, laboratory report, other report, computer fi les, data listing and/or programs.
  - 2.2) Using, during a test, materials not authorized by the person giving the test.
  - 2.3) Collaborating with another person without instructor authorization during an examination or in preparing academic work.
  - 2.4) Knowingly and without instructor authorization, using, buying, selling, stealing, transporting, soliciting, copying, or possessing, in whole or in part, the contents of an unadministered test or other required assignment.
  - 2.5) Substituting for another student or permitting another person to substitute for oneself in taking an examination, preparing academic work, or attending class.
  - 2.6) Bribing another person to obtain an unadministered test or information about an unadministered test.
  - 2.7) Using technological equipment such as calculators, computers or other electronic aids in taking of tests or preparing academic work in ways not authorized by the instructor or the university.
- 3) Plagiarism means the appropriation of another's work and the unacknowledged incorporation of that work in one's own written work in any academic setting.
- 4) Collusion means the unauthorized collaboration with another person in preparing written work in any academic setting.
- 5) Abuse of resource materials means the mutilation, destruction, concealment, theft or alteration of materials provided.

This syllabus subject to change as deemed appropriate by the instructor.
